Legal information  
All tests were carried out in a normal climate (23°C) (unless a different temperature is specified). The values given were determined from many individual measurements as average values and correspond to the state of our current knowledge. They serve only as information about our products and are intended as an aid to material selection. They do not constitute a legally binding guarantee of specific properties or suitability for specific applications. The tests were carried out on specimens of extruded semi-finished products. Since the properties of the plastics depend on the

processing (extrusion, injection molding) and also on the dimensions of the semi-finished products and the degree of crystallization, the actual property values of a particular product may deviate somewhat from the specifications. We will be pleased to provide you with information on dosing properties. For the design of constructions and the definition of material specifications, we will be pleased to provide you with the data applicable to your application upon request. Notwithstanding the above, the customer bears sole responsibility for thoroughly testing the suitability, performance, efficacy and safety of selected products in pharmaceutical, medical device or other end-use applications.
